

Patheon and TraceLink ... creating value-based strategic supply partnerships

Today's Life Sciences market – global, diverse, uncertain and competitive – requires a great supply network. You need supply partnerships providing precise and timely product and production information, connected to a collaborative decision-making environment that enables you to excel.

Unfortunately, for most Life Sciences companies the reality is different. You are faced with:

- Ad hoc access and infrequent updates to precise business information
- Disjointed data feeds and re-keying of information from phone, FAX and email
- Disconnected teams and information silos along the production lifecycle
- Slow, imprecise reaction to unplanned supply issues
- Inability to respond to unanticipated market demands and opportunities

Patheon and TraceLink optimize your supply performance and operational planning

We give your business owners, operations and enterprise systems direct and instant access to your external supply chain data through a cloud-based exchange network. We connect your people, processes and transactions across the supply chain to deliver:

- Value creation – Real time supply network data to optimize business planning
- Cost reduction – Reduced inventory levels and production cycle times
- Operational agility – Faster and more precise response to changes in demand
- Risk reduction – Quicker identification of production issues before they impact schedules
- Regulatory compliance – Platform to support integrated serialization data requirements
- Performance – Common metrics to drive continuous supplier performance

“We look at our contract partners as an extension of our internal manufacturing capabilities so close communication and collaboration is important. This innovative partnership [Patheon and TraceLink] helps us improve our visibility into our manufacturer partner network and will enable real-time integration for daily business supply transactions.”

Brian Brown,
Director eCommerce Logistics, Cephalon
