New IDC Research: Leveraging Commerce Networks to Predict, Prevent, and Resolve Supply Chain Issues

On-Demand Webinar

Duration: Sep 30, 2021 - Sep 30, 2021

Industry 4.0 has arrived, and manufacturing organizations must digitalize supply chains to remain competitive, avoid disruption, and drive significant improvements in performance. The fastest and most effective way to get started is by digitalizing supply chain issue management with a multienterprise supply chain network.

Simon Ellis

Program Vice President
IDC

Join this webinar hosted by **IDC Program Vice President Simon Ellis and TraceLink Vice President of Product Marketing John Bermudez** to get a firsthand look at IDC's latest research which reveals why commerce networks have emerged as key enablers for operational resilience that drive supply chain performance to new levels.

You'll also learn how these networks provide a platform for digitalization that is empowering manufacturers to **resolve supply chain issues 65% faster, reduce the total number of supply chain issues by 35%, and improve on-time, in-full delivery performance by 82%.**

Learn how you can predict, prevent, and resolve supply chain issues.
