How to Use Continuous Improvement Programs to Reduce Supply Chain Disruptions

On-Demand Webinar
Duration: Nov 10, 2021 - Nov 10, 2021

From factory closures in Asia and port congestion in California to shortages of components, finished goods, and workers, the list of problems impacting your supply chain is growing fast.

Join TraceLink and Azul Partners, a leading supply chain and procurement consulting firm, for this on-demand webinar and learn the key steps your team can take to continually improve supply chain visibility and mitigate the impact of these supply chain disruptions.

You'll get expert advice on how to use the newest digital supply chain issue management technology to identify recurring issues that make your supply chain vulnerable to disruptions. You'll also learn how manufacturers can use continuous business process improvement methodologies like Six Sigma to achieve a **50% reduction in repeat deviations and a 97% reduction in supply chain disruptions.**

Featured Speakers:

	<p>Lisa Reisman, CEO, Managing Director, and Lead Analyst with Azul Partners, will share real-world examples of continuous improvement in action and explain how to work more effectively with supply chain partners to achieve continuous improvement objectives.</p>
	<p>Lucy Deus, Senior Vice President of Product Management at TraceLink, will share best practices for reducing repeat deviations, defects per million, and supply chain disruptions.</p>

See how top teams are using supply chain issue management technology to collaborate more effectively with supply chain partners and achieve success despite challenging global disruptions. Watch the webinar on demand today!
