Real-Time Data Exchange for NetSuite

The TraceLink Digital Network Platform for NetSuite, powered by Opus Link Actions, are ready-to-deploy integrations that streamline the traditionally complex process of linking NetSuite to exchange business transactions, such as invoices or shipment notifications, with supply chain trading partners. By seamlessly integrating with customers' and trading partners' existing NetSuite systems, Opus Platform users can accelerate business integration and transaction exchange, significantly reducing long lead times for integration projects, thereby driving down costs while enabling more agile operations and transforming how companies manage their supply chains.

Seamless Integration: As an out-of-the-box integration, Link Actions provide pre-configured, ready-to-use solutions that seamlessly work with your existing systems, ensuring a smooth implementation and support for custom-built workflows.

Optimized Data Transmission: Businesses can control the frequency of data transmissions on each transaction type, optimizing bandwidth for both inbound and outbound exchanges, further simplifying integration with existing infrastructure.

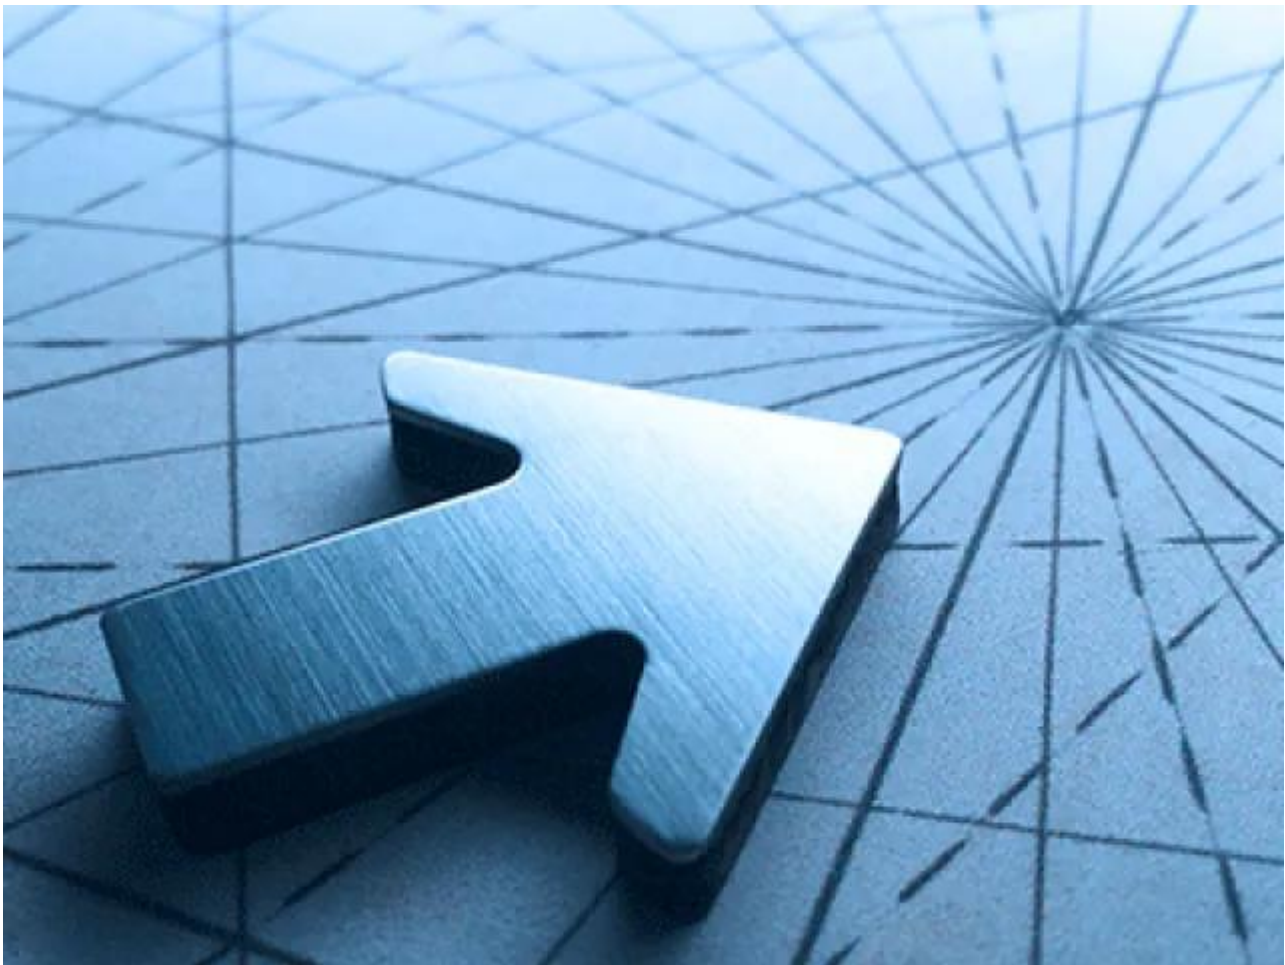

Highly Configurable: Link Actions efficiently manage intricate data structures and customizations in your NetSuite instance, supporting complex queries across multiple data sources, all without the need for extensive custom development.

Get Started with the TraceLink Digital Network Platform for NetSuite

To learn more about our XTT Link Actions offering, see our use case [here](#).

To speak with TraceLink to set up your NetSuite integration, contact our integration specialists by emailing partner-operations [at] tracelink.com (partner-operations[at]tracelink[dot]com).
