UI features

The following new or updated functionality will be included in this release.

Opus Administration Enhancements in the Networks, Links, Users, and B2B Integration UI Screens

Networks

This feature includes enhancements to the Networks experience task:

- The now includes a Description field, which is a brief description of the network's purpose (1000 characters maximum).
- The user roles for a network and app are now visible in the Action menu.

Links

This feature includes enhancements to the Links experience task:

- When and establishing Links or importing Links, the drop-down used to specify the network being linked to is renamed from Network (Owner) to Application - Network (Owner).

- When a user is , the Entity drop-down now displays in the following format for users to more easily understand the identifier that is being selected:
  - For company level IDs: Company Name - Identifier Type - Identifier Value

(Company)

- For location level IDs: Company Name - Identifier Type - Identifier Value (Location)

- The Error field is removed from Failed Links on the screen because the Error Description field already include details about the error.

Users

This feature includes enhancements to the Users experience task:

- When a user , the Team drop-down now indicates the Owner of that team (i.e. Team (Company)).
- System Administrators can now from the All tab.

B2B Integration

This feature includes enhancements to the B2B Integration experience task:

Transform Sets tab

- The Application drop-down is renamed to Application (Owner).
- The new optional Transform Set type-ahead field is added to the Link section when configuring the . This field allows users to confirm that the transform set is associated with an inbound connection. The Transform Set type-ahead field is populated based on the value selected in the Application (Owner) drop-down.

- The Transform Set field is only enabled if the user selected an application licensed to their company (Owner of the app). It is disabled if the user selected an app which is not licensed to their company (Partner of the app).

- The Inbound-Outbound screen now includes a Transform Set column to display the Transform Sets that are linked to the Inbound Configuration.

Integration Principals tab

- The Application drop-down and column is renamed to Application (Owner).
- System Administrators can an integration principal to enable secure system-to-system communication with integration specific access to an app or network they are assigned.
- The Integration Principals screen now includes a Status column to indicate if the Integration Principal is active or inactive.

System features

There is no new or updated system functionality included in this release.

Resolved issues

Administration, solution version 7.0.0

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

ID	Interface	Issue Description
CMCP-37065: Failed Link default page should be sorted by the date created in descending order with the latest results being displayed first	Web UI	The failed Links were displayed in a random order. The Links should be displayed based on the date and time when a user tried to create the link. This issue is resolved.

Known issues

Administration, solution version 7.0.0

There are no known issues in this release.
