Product Availability Intelligence for Hospitals and Pharmacies

Predict drug shortages up to 90 days in advance with high accuracy.

Drug shortages lead to delays and cancellations in medical procedures, limited treatment options for patients, and an annual 15%-30% increase in generic drug sourcing costs. But what if you had the capability to predict shortages of critical NDCs up to 90 days in advance?

With TraceLink Product Availability Intelligence for Hospitals and Pharmacies, you can!

Fill out the form to download our new solution brief and learn how Product Availability Intelligence enables hospitals and pharmacies to:

- Acquire an early warning of drug shortages.
- Engage wholesalers, manufacturers, and third-party drug suppliers proactively to ensure sufficient drug supply.

- Identify alternate drugs at an affordable price well before a shortage occurs.
- Prevent expensive labor overhead and chaos caused by unexpected shortages.

See how Product Availability Intelligence gives you the power to improve patient care, protect brand credibility, reduce drug sourcing costs, and reduce labor costs. Read the solution brief today.
